FOMA BW FILMS

FOMAPAN 100

The Fomapan 100 is a flexible, high-ASA, fine-grain film which is very forgiving of errors in exposure. It tends to have a bit less negative density in the shadow areas - but this depends on the developing.

This is the least expensive 100 ASA Film which is available in 35mm, 120 Rollfilm, and sheet film.

FOMAPAN 200

Fomapan 200 is panchromatically sensitized, black and white negative film of the speed ISO 200/24°. It is the film of new generation, making full use of outstanding properties of hexagonal core/shell tabular silver halide grains. The film features excellent resolving power and low granularity and is intended for use under normal or slightly unfavourable light conditions. Its wide exposure latitude allows exposures in the speed range from ISO 100/21° to 800/30° without change of development time. The film is available in roll film 120, sheet films, perforated 35 mm films including long length rolls.

PAPERS - RESIN COATED

FOMA Fomaspeed multigrade RC photo papers, with neutral blacks and a high light sensitivity.

FOMASPEED RC MULTIGRADE 311 HIGH GLOSS

Neutral-to-warm photo paper on an RC base. The Fomaspeed stands out above all because of its good tonal range in the highlight areas.

This makes the paper ideal for beginners or for working prints as well as portraits.

Silver chlorobromide emulsion. Fomaspeed has developing agents incorporated in the emulsion, resulting in very short exposure and developing times.

A high-quality and easy-to-use all-round paper, which is equally suitable for tray or machine development. Variable Contrast: 00-4,5

Red or dark red dark room safelight should be used. All other light colors can fog this paper! Please do a test first if you are not sure.
